

Vendor Registration - Local & Overseas Vendors

Phoenix Vendor Portal - BOT Process

BOT Process Overview:

The vendor registration BOT works in two stages.

First, during “**BOT verification in progress (Document verification) in Phoenix vendor portal**”, it extracts and validates details from submitted documents. After Procurement and Finance approval, the BOT pushes the vendor data into DAX.

If it detects issues during update, such as on-hold accounts, duplicate or existing TL numbers in DAX, or other validation conflicts, it moves to second stage “**BOT Error – Manual intervention required,**” where the process is paused for manual review and correction in the Phoenix vendor portal.

1. BOT verification in progress (Document verification)

- VAT certificate verification (Local vendors)
- Trade license number and expiry verification (Local vendors)
- Bank details verification (GEMS bank verification letter)

2. BOT Error – Manual intervention required.

- Vendor account on-hold in DAX (Email trigger below)

Alert: **BOT** Failed to Process - 18653, MED SHOP DRUGS STORE (LLC)

Bank Account error

- Already pre-existing bank account. New bank details provided by the vendor.

Logic: The flow does check for non-matching bank accounts and sends an email if multiple or mismatched bank accounts are found

Dear Team,

The vendor THE JAM JAR LLC has encountered an error and is not able to create/update the vendor in DAX.

Failure Reason - Bank account 90030200001945 already exists for vendor V12114, but other bank details are changing. please verify manually. # Vendor ID:V12114

Requesting you to intervene and create/update the vendor into DAX manually and please ensure to update the application status into Phoenix once completed. This will ensure data accuracy in the system.

Regret the inconvenience caused.

Regards,
GEMS RPA Team

- Same bank account but IBAN or Swift code different.

Logic: The flow checks for matching and non-matching bank accounts, and if there are issues, it sends an email with a list of non-matching banks, but not this exact message.

GEMS RPA Team

- The VAT number does not meet the required length

Logic: If the VAT number is not 15 digits, the flow appends "The VAT number does not meet the required length." to the error message.
